Twitter: [@ShiningCrusader](#), [@nexatli](#)

Description

The Nexatli Expedition is a metroidvania platformer with GameBoy and early cinema aesthetics.

Features

Low-resolution pixel art augmented with modern graphic effects

The game runs on Unreal Engine 4 and leverages its capabilities to modernize gameboy-styled pixel art with transparencies, glow, distortions and more.

Freedom of exploration

The Nexatli Expedition is a metroidvania at heart but nobody is telling you where to go. Feel free to explore.

Built for platforming

Run, jump, skid and crawl as you would in a platform game. Timed jumps and stomping enemies will be of the essence to navigate the environment.
